Agenda

Explore what we'll achieve in this session.

- 🕒 5 min - Intro to Claude Code
- 🕒 10 min - The Mission: Dashboard Tweak
- 🕒 30 min - Hands-on Session
- 🕒 15 min - Wrap-up & Learnings

The Goal

Leave this room with a modified, tested, and reported feature in under 60 minutes.

What is Claude Code?

It's not just a chatbot. It's an AI Engineer in your terminal.

- **Deep Context:** Understands your entire codebase.
- **Agentic:** Can execute commands, read files, and write code.
- **Safe:** Built with a "human-in-the-loop" safety model.
- **Fast:** High-performance CLI for rapid iteration.

Example usage

```
claude "add a dark mode toggle to the dashboard"
```

The "Iron Man" Architecture

How an AI Engineer actually works.

The Upgrade Module

"Skills are like snap-on upgrades for your armor."

ENCAPSULATED

Complex logic wrapped in simple natural language.

REUSABLE

Write the capability once, use it in any mission.

SECURE

Sandboxed execution protecting the pilot.

SYSTEM STATUS: ONLINE

You provide the **intent**, Claude handles the **execution**.

The Superpowers

Custom workflows designed for excellence.

Skill	Purpose
Brainstorming	Planning features and exploring options before coding.
Coding	Building features and fixing bugs with deep awareness.
Testing	Verifying functionality with <code>`webapp-testing`</code> .
Comms	Reporting progress with <code>`internal-comms`</code> .

"The difference between a good engineer and a great one is the quality of their plan and their verification."

Workshop Activity

We're moving from Idea to Verified Feature.

Ready to Dive In?

Let's open the terminal and start the workshop.

Start by asking:

```
`"Help me brainstorm a change to the dashboard."`
```
